HOW TO USE BASIC SPONGE SORBENTS

Basic SPONGE Sorbents are the most cost-effective and versatile absorbent pillow on the market today. Absorbs oils, grease and non-aggressive fluids. Not recommended for use with aggressive fluids including, strong acids, strong bases, oxidizers or hazardous materials containment. TO ASSURE MAXIMUM SAFETY AND EFFECTIVENESS, FOLLOW THESE EASY STEPS:

Note: For best results, fluff up the sorbent filler materials which may have compressed during shipment.

1. CLEAN UP LOOSE ABSORBENTS, RAGS AND DEBRIS.

Sponge Sorbents are designed to work alone and must be in direct contact with leaking fluids. **DO NOT** place the sorbent on top of any loose clay.

2. WHICH BASIC SORBENT?

Accidental spills are easily controlled and cleaned up with the snake.

The sucker keeps oil from getting onto the work floor and makes your plant a clean, safe and more productive place to work.

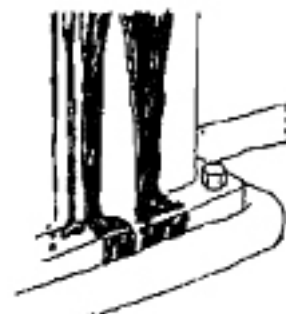

3. PLACE SUCKER UNDER DRIPS... OR WHERE THERE MAY BE LEAKS.

Slide the SUCKER underneath the source of drips and leaks from valves, fittings, under machinery or in hard to reach places.

4. PLACE THE SNAKE AROUND THE PROBLEM AREA.

Place the SNAKE around the base of machinery where leaks may occur. The flexible SNAKE easily molds into any shape and stays put.

5. LET IT WORK!

6. WHEN FULLY SATURATED, DISPOSE OF THE SORBENT

Simply pick up the sorbent, place it in a container and then dispose of it according to local, state and federal regulations. Immediately replace with a new SPONGE™ Sorbent. No more sweeping, shoveling and sweating.
